

I am a Computer Science student at Sheffield Hallam University, graduating in 2026, with experience building web applications, C#/.NET systems, Unity projects, and database-backed software. Skilled in C#, C++, JavaScript, SQL, Git, object-oriented programming, and full-stack development. Seeking a graduate software development role where I can contribute to maintainable, user-focused software.

Technical skills

Languages: C#, C++, Kotlin, JavaScript, SQL, HTML/CSS.

Frameworks/Tools: .NET MVC, Entity Framework, Unity, Git, GitHub.

Databases: SQL.

Concepts: object-oriented programming, data structures and algorithms, authentication, full-stack development, software architecture.

Projects:

Multi-Tenant Complaint Management System

Tech stack: C#, ASP.NET MVC, Entity Framework, SQL, Microsoft Cookie Authentication.

- Developed a multi-tenant complaint management system where users could only access complaints linked to their own tenant.
- Implemented authentication and role-based access using Microsoft Cookie Authentication.
- Used Entity Framework to model, query, and persist complaint data.
- Designed separate access flows for customers, internal employees and external employees.

XLN Case Duplicate Prevention System

Tech stack: HTML, CSS, JavaScript, PHP, PHPMailer, SQL, Git/GitHub.

- Collaborated in a team of five to develop a web-based duplicate case prevention tool for managing customer support cases.
- Designed and implemented front-end pages to allow users to enter case information clearly and efficiently.
- Contributed to back-end functionality for checking submitted case details against existing records to help prevent duplicate entries.
- Developed automated email notifications using PHPMailer to alert users when case actions were required.

Smart Home System

Tech stack: C++, object-oriented programming, file handling, console application.

- Developed an object-oriented C++ console application simulating a smart home device management system.
- Used object-oriented programming to model different device types and behaviours.
- Implemented add, remove, view, save, and load functionality through a menu-driven interface.

- Used file handling to persist device data between sessions.

GhostMania - Unity Vertical Scrolling Rhythm Game

Tech stack: Unity 6, C#, Unity UI, AudioSource, input handling, game state management, Git/GitHub.

- Developed a Unity rhythm game with modular systems for note spawning, input detection, scoring, and gameplay state management.
- Used song playback time to synchronise note behaviour with the music and calculate player timing accuracy.
- Created reusable prefabs and scripts to manage note objects, UI updates, and player feedback.

Custom Post-Processing Effects in Unity URP – Final Year Project

Tech stack: C#, Unity 6, URP, HLSL, Scriptable Renderer Features.

- Developed custom post-processing effects such as bloom and motion blur using Unity's Universal Render Pipeline.
- Implemented Scriptable Renderer Features to compare custom effects against Unity's built-in post-processing.
- Evaluated visual quality and performance through test scenes and Unity Profiler data.

Education

BSc Computer Science – Sheffield Hallam University

2023 – 2026

Relevant modules: Advanced Programming, Functional Programming, Software Architecture and Design, Professional Software Projects, Algorithms and Data Structures, Databases and the Web, Game Development. Achieved a 2:1

A-levels – Thomas Rotherham College

Psychology A, eSports C, Criminology D.

GCSEs – Winterhill School

Including Maths 7, English Language 4, Computer Science 5.

Work experience

Kitchen Associate – JD Wetherspoon

2023 – Present

- Balance part-time kitchen work with university deadlines and software projects.
- Prioritise food preparation, stock management, cleaning, and cooking tasks during high-pressure periods.
- Coordinate with team members to keep service moving efficiently during busy shifts.

Crew Member – Barburrito

2021 – 2023

- Delivered customer service and supported kitchen operations in a fast-paced environment.
- Developed teamwork, reliability, and time management skills.
- Awarded Employee of the Month for strong service and work ethic.
